1. Executive Summary

AsiaBaseMetals Inc. ("the Company") is a growth company focused on the exploration and development of metals, including base metals such as zinc, iron and alkali metals such as cobalt and lithium. The Company has projects in British Columbia and Ontario, Canada.

The Gnome zinc project has land claims that encompass 5,868 hectares and are located strategically in the heart of an area home to some of Canada's important zinc deposits and the focus of much past exploration. The Gnome project lies 70 km SE from the Cirque Zn-Pb-Ag deposit and 46 km SE along trend from the Akie Zn-Pb-Ag deposit, all of which are in the Kechika trough, a geological belt northeast of Williston Lake containing these and other sediment-hosted Zn-Pb-Ag prospects along trend. These deposits and prospects were discovered in the heyday of northern British Columbia Zn-Pb-Ag exploration during the late 1970's and early 1980's.

Work on the Gnome project to date includes mapping and sampling during the 1970's and exploration work by the Company. The Company conducted an exploration program during fiscal 2012, fiscal 2013, fiscal 2018 and fiscal 2019. This historical work has identified six target areas listed as Areas A-F on the Property. The 2019 exploration program included drilling on HQ size core hole down to a depth of 140m to test targets in Area C. Although the drill hole intersected favourable lithological unit of Gunsteel Formation comprising of grey and black carbonaceous shales with 1-3% sulphides, the assays indicated no anomalous values of target metals. The 2019 work also included prospecting, mapping and sampling work in areas D and G (a newly identified target area). Results of 16 soil and 4 rock sampling in new area G has shown favourable results. The results indicate Area G as new potential target for further exploration work.

The Jean Iron Ore Property ("Jean Property") is an iron ore exploration property located in the Thunder Bay Mining District of Northwestern Ontario, Canada. The property is currently comprised of 78 mineral claims covering 1,560 hectares' land (after re-staking of expired mineral claims in January 2019) located approximately 65 kilometres to the southwest of Thunder Bay, approximately 2 kilometres north of the Whitefish Lake on Highway 588. (Previously the claims comprised of 17 claims totaling 1,584 hectares).

As at October 1, 2016, the Jean Property consisted of 18 mineral claims in 115 units covering 1,840 hectares' land. On November 16, 2016, the Company forfeited 4 mineral claims consisting of 17 units covering 272 hectares' land. On March 14, 2017, the Company staked one additional claim consisting of 1 unit covering 16 hectares' land. As at March 31, 2018, the Jean Property consists of 15 mineral claims covering 1,584 hectares land consisting of 99 units.

During the year ended September 30, 2016 the Company completed an exploration program for the Jean Property and completed a report on the property. The Ontario Ministry of Northern Development and Mines has accepted the work submission and all claims have been extended to November 2017. As at December 20, 2017, the Company has initiated and completed a work program and has filed a request to extend the filing deadline to January 2018. These claims will likely be re-staked by January of 2019.

In addition to advancing the Gnome and the Jean projects, the Company is focused on identifying, acquiring and developing other business opportunities with a special focus in the cannabis sector in legal jurisdictions.

Highlights of 2019 eight soil and 12 rock samples results from an area identified as Area G:

Soil Sample Results – Highlights (Table -1 - below):

- Cobalt (Co) values are in the range of 7.8 parts per million (ppm) to 858.5 ppm (0.08%) where seven samples are over 700 ppm Co.
- Zinc (Zn) values are from 268.2 ppm to 30,317 ppm **(3.03%) Zn**.
- Manganese (Mn) values are in the range of 531 ppm to 18,874 ppm **(1.88%) Mn**.
- Iron (Fe) is in the range of 1.52% to over 40% **Fe**.
- Nickel (Ni) values are in the range of 46.4 ppm to 5,144 ppm **(0.51%) Ni**.
- Molybdenum (Mo) is in the range of 20.07 ppm to 692.87 ppm **(0.069%) Mo**.

Rock Sample Results - Highlights (Table -2 - below):

- Grab rock samples results indicate cobalt values in the range of 1.8 ppm to 725.5 ppm **(0.07%) Co**, zinc 56.9 ppm to 17,707 ppm **(1.77%) Zn**, nickel 1.9 ppm to 1,988.2 ppm **(0.19%) Ni**, Manganese 22 ppm to over 12,653 ppm **(1.26%) Mn** and iron 0.28% to over **40% Fe**.

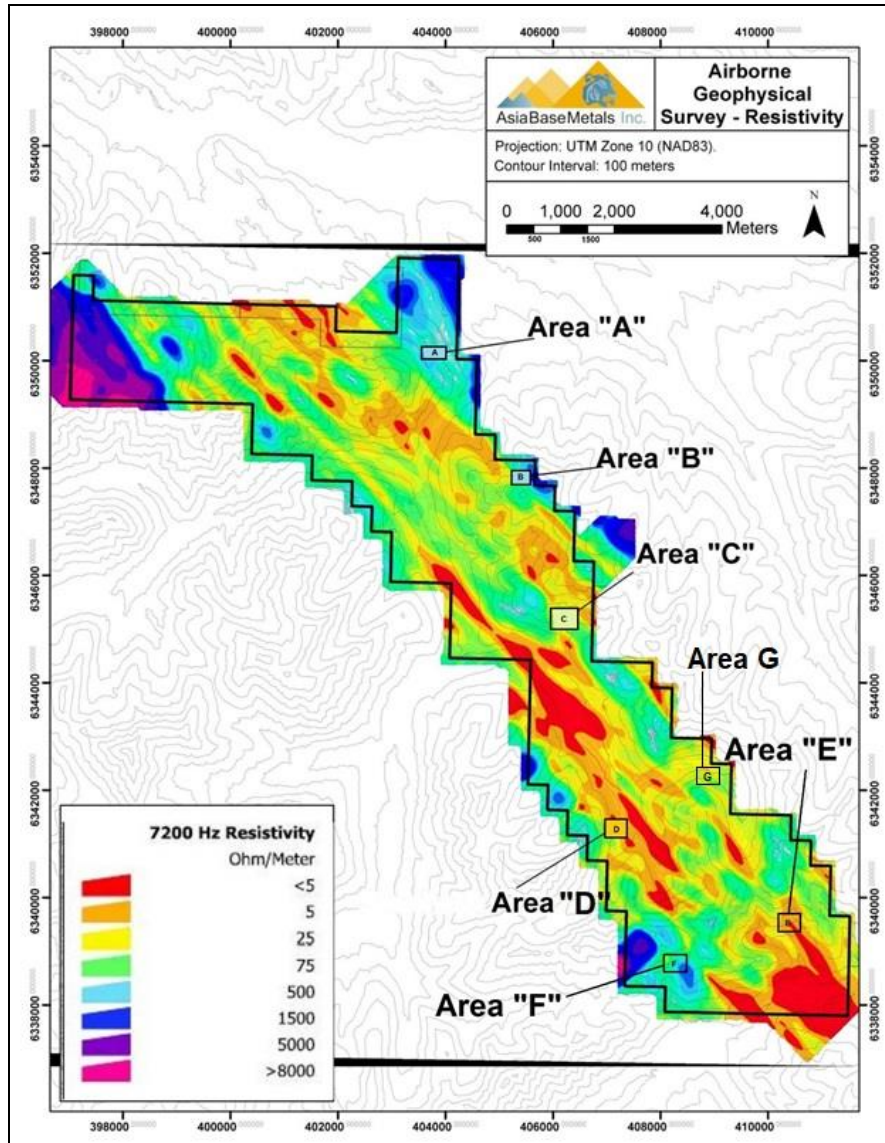

The 2019 exploration program also included the drilling of one 140m hole (true depth of 80m) (Azimuth 270, dip -50, location: 6345164N, 406023E on NAD 83 Zone 10) to test for shallow targets in Area C. Although the drill hole intersected favourable lithological unit of Gunsteel Formation comprising of grey to black carbonaceous shales with 1-3% sulphides, the assay results indicated no significant anomalous values of target metals.

With the inclusion of Area G, seven potential target areas to date have been identified on the property where topsoil has shown limonitic and hematitic alteration with high nickel, cobalt, manganese and zinc mineralization (see **Figure 1**). The Company has drill tested only Area C and intends to continue exploration on the other six areas.

2. Fiscal Year 2019 Highlights (continued)

Figure -1: Exploration Areas – A, B, C, D, E, F & G

Although drilling results did not meet expectations of identifying a shallow mineralization possibly amenable to open pit mining, the discovery of a new target area and the remaining targets in other areas identified to date on the Gnome property continue to present a good chance of a discovery for cobalt and zinc at shallow depths, and especially at deeper depths. The Company intends to advance this project in congruence with market conditions. ”
